

## **User Interface Designer**

As a UI Designer, you will work closely with engineers and product managers throughout all stages of the product cycle. If you're a critical thinker with a good design sense, a strong technical background, and an eye for making things better, and if you're looking for a job where your work can have an impact then this is the role for you.

### **Responsibilities will include:**

Helping to define the user model and user interface for new and existing Google products and features.

Developing high level and/or detailed storyboards, mockups and prototypes to effectively communicate interaction and design ideas.

Gauging the usability of new and existing products, and making constructive suggestions for change.

### **Requirements:**

Solid academic background in human-computer interaction or related field (BS or MS in Computer Science or related field a big plus).

Demonstrated experience in designing usable web-based interfaces.

Expert HTML skills.

Excellent knowledge of JavaScript for rapid prototyping purposes.

Strong visual design sense.

Excellent leadership, communication and teamwork skills.
