

How to Update using our HTTP Site

You must install TERMS Version 2.80 from our CD Rom before installing this product. You should have received this CD-Rom in February 2006 (TERMS only).

Please make sure the program is closed before installing this update.

This Service Release was updated on November 30, 2006. This is being released to Version 2.80 users only.

Download the Vers28sr6.zip from

<http://www.maxcomonline.com/cs/downloads/version28/terms/vers28sr2.zip>

The file will automatically upload to your computer (if you have a Zip Compression Program). Click on the Extract and extract the contents to your WT32 folder, which is the one that is our Default Application directory. Overwrite files if asked to do so.

Open the TERMS program through Start, and then Programs and MCT MSDS Software.

If you have already ran the DBUpdate (such as if you are in Version 2.8 or above) you do will have to run it again. To run DBUpdate, go to Start> Programs>MCT MSDS Software>DBUpdate. When Ready appears, go to File>Update MSDS Standard. If you did run this utility and it still states that you need to run DBUpdate, open DBUpdate and before running Update MSDS Standard, go to File>Open Database and find the MSDS.MDB on your computer or network drive. Then run File and Update MSDS Standard.

To verify that the patch was applied, go to Help and About TERMS . Check to make sure the version number under the product name is 2.8.2

See the [revisions.htm](#) for all releases from 2.20 to the latest release.

Thanks!
