

How to Update using our HTTP Site

You must install TERMS Version 2.90 from our CD Rom before installing this product. You should have received this CD-Rom in May 2006 (TERMS only).

Please make sure the program is closed before installing this update.

This Service Release was updated on February 13, 2007 and we are now at Version 2.10.1. We are releasing this for version 2.9 customers due to the problems corrected in this maintenance release.

Download the Vers29sr7.zip from

<http://www.maxcomonline.com/cs/downloads/version29/terms/vers29sr7.zip>

Extract the files contained to the WT32 folder on your C drive or where the application may be installed on your computer.

Make sure TERMS is not open before you commence the extraction.

What this addresses:

See the [revisions.htm](#) for all releases from 2.20 to the latest release.

What you may have to do after the Extraction:

If you have already ran the DBUpdate (such as if you are in Version 2.9 or above) you may have to run it again. An indicator to need to run DBUpdate is after applying this service release and you try to execute TERMS, a message comes up that the Tier2.mdb or msds.mdb is earlier than the program, please run DBUpdate.

To run DBUpdate, go to **Start> Programs>MCT MSDS Software>DBUpdate**. When Ready appears, go to **File>Update Database for Program Update**. If you did run this utility and it still states that you need to run DBUpdate, open DBUpdate and before running **Update Database for Program Update** go to **File>Open Database** and find the MSDS.MDB on your computer or network drive. Then run **File** and **Update Database for Program Update**.

To verify that the patch was applied, go to Help and About TERMS . Check to make sure the version number under the product name is 2.9.0.7

Thanks!
